

Management — How-to Guide

A practical guide to running the portal as **Management / Admin**. This covers the fortnightly payroll cycle, setting up sites, sign-offs, and managing people. Best used on a desktop or laptop.

1. Getting started

1. Go to the portal and tap **Admin / Foreman Login**; sign in with your email and password.
 2. You'll land on the **Dashboard**, which is your menu. The main areas are:
 - **Booking In** — the wages register and paying.
 - **Variations** — extra works.
 - **Production cost** — wages by site.
 - **Manage sites** — price grids and Excel imports.
 - **Jetwash** and **Roof firesocks** — progress tracking.
 - **Quality checks** — stage inspections and sign-off.
 - **Workers** — inductions, profiles, activation.
 - **Holidays** — leave tracker.
 - **Settings** — pay cycle, fees, booking window.
-

2. Setting up a site (do this before foremen can claim)

1. **Manage sites** → **New Site** — enter the name, address and site code.
2. Open the site and fill in **Document details** (developer/client name, contact, site address, surveyor, reference) — these appear on variation PDFs and QA inspections.
3. **Import Excel** — upload the priced grid spreadsheet. This builds the plots × stages with their values. Check the totals at the bottom look right.
4. **Assigned Foremen** → **Add** — assign the foremen who can book in on this site. Only assigned foremen can claim against it.

Tips: **Add Column** adds a stage; **Clear Grid** wipes the grid (careful — it's destructive). Re-importing replaces the grid.

3. The fortnightly payroll cycle

This is the core weekly-to-fortnightly routine.

Approving claims

1. Go to **Booking In** → **Pending** (or the **Pending claims** screen).
2. Each pending claim shows the foreman, site, period and pool total. Expand **Pool breakdown** to see the **per-worker pay** — gross, admin fee, insurance, CIS tax, and net.
3. Check it looks right. If you need to dock money from a worker, use **Add custom deduction**.
4. Tap **Approve & Pay** to approve — this writes the pay to the wages register and sends payslips (email/SMS if configured). Or **Reject** and add a reason for the foreman.

Once approved, a claim can't be re-approved, and the same lift can't be paid twice — the app enforces this.

The Wages Register & paying

1. **Booking In** shows the **Wages register** — use the **pay period tabs** to pick a fortnight.

Management — How-to Guide

2. Review the totals: Gross, Fees, Tax/CIS, NI, Net.
 3. **Apprentices** are employed — you can edit their **tax/NI** here to match your payroll figures.
 4. Export with **Bank CSV** (to import into your banking) and **Excel** (for your records).
-

4. Variations (extra works)

1. **Variations** shows the VO register and a **Pending** queue.
 2. Review a foreman's submitted variation (with photos), and approve it. Approved variations get a **VO number** and can then be claimed in a fortnightly claim.
 3. The register tracks foreman cost and developer payment status.
-

5. Quality checks (sign-off)

1. **Quality checks** lists your sites and inspection progress.
2. Open a site — it mirrors the price grid (plots × stages: Joist lift, Plate/Roof, Pre plaster, CML).
3. **Tap a stage cell** to inspect that plot/stage. Fill in the checklist (Yes/No/N/A), set the **result (Pass/Fail)**, sign, and add photos. This generates a signed inspection PDF.
4. Completed stages turn **green**. Re-inspecting keeps a history of the previous sign-off.

The inspector is recorded as **you** (the logged-in user), so sign-offs are always attributable.

6. Jetwash & Roof firesocks

- **Jetwash** — track which plots have been washed, and the pay log.
 - **Roof firesocks** — view the evidence photos foremen upload per plot, and the developer PDF.
-

7. Managing people (Workers)

1. **Workers** shows **Pending / Active / Inactive** tabs with counts.
 2. **New starters** appear under Pending — review their details and **activate** them so they can be used/log in.
 3. **View Profile** shows their details, qualification, CSCS, and (for subcontractors) the signed agreement PDF. Bank/UTR are masked for privacy.
 4. **Change a job role** on the profile (e.g. promote to Foreman or Management) — **Save role changes**. Promoting to a login role prompts for a portal password.
 5. **Set Inactive** removes a leaver from active lists.
-

8. Holidays

1. **Holidays** is the leave tracker for **management-level staff**.
2. Set each person's **allowance** for the year (admin only), and **approve/reject** leave requests.

Note: only people with the **Management** (or Admin) role appear here. If someone should be in the tracker but isn't, check their job role is set to Management on their profile.

9. Settings

Settings controls the money and timing rules:

- **Admin fee** and **insurance fee** (deducted from subcontractors, not from management/apprentices).
- **Apprentice holiday** and **college** day rates.
- **Pay cycle & booking window** — the fortnightly work dates and pay day. There's a "**Use current cycle dates**" button that keeps these current; run it if the dates look out of date.

Changes here apply to **pending** claim previews immediately; already-approved claims keep the fees they were approved with.

10. Production cost

Production cost shows **wages paid by site, by month** — useful for tracking spend per site over time.

Quick routine each payday

1. Foremen submit claims before the apply-by day.
 2. You **approve** them on **Pending claims** (check the per-worker breakdown).
 3. On **Booking In**, review totals and edit apprentice tax/NI if needed.
 4. Export the **Bank CSV** and import to your bank; keep the **Excel** as a record.
 5. Keep an eye on QA sign-offs, variations, and firesock evidence as sites progress.
-

This guide covers the current app and will be updated as new features (e.g. training matrix, cost-to-complete, bank-holiday leave) go live. Questions the app can't answer — just ask.
